## What's New In?

Sensatronics Tray Tool is designed to work with Sensatronics model E4 and U16 units. It offers an easy way to monitor these units from the Windows system tray. The application is user-friendly, portable and uses very little of the system's resources. Sensatronics Tray Tool runs on all Windows operating systems (Windows 2000/XP/Vista/7). It's fast and responsive, and it uses less than 150 KB of RAM, so it won't affect the operating system. It's also completely portable, so it's easy to run even if you only have a tiny mobile or netbook with low RAM. Sensatronics Tray Tool is both affordable and educational. It's a donationware, so you'll be able to monitor any of the Sensatronics units for free. Most importantly, the application shows the date and time of the last operation or status change of the Sensatronics units. You can also click on the tray icon to open the menu. You can easily monitor the units individually or in a group. If you want to monitor several Sensatronics units, you can monitor them in a different way, even having different time zones. It's easy to use and configure, so it's very convenient to work with. Its design is very clear, easy to understand, and you can open and close the tray icon from a button, if you want. The application can be configured to launch at system start, to launch when you connect a unit to your PC, or to launch on demand, so you can monitor a unit from a PC running in the background. Sensatronics Tray Tool does not require installation and it's very easy to uninstall, so it won't eat away your valuable system resources. It can work with the Windows system tray and, therefore, it doesn't need to be located in any particular folder. It will be automatically added to the Windows system tray. Sensatronics Tray Tool includes powerful features such as a complete menu, system tray menu, tray icon, clock, quick operation, short cut keys, automatic window opening and closing, sensitive units monitoring, logging and reporting, and much more. Features: - Supports all Sensatronics models E4 and U16. - Shows the date and time of the last operation or status change of the Sensatronics units. - Shows the current status of the units (active or idle). - Shows the status of the units by its current temperature and/or current voltage. - Shows the current status of the units individually or in a group. - Shows the current temperature and/or current voltage of the units individually or in a group. - Shows the time of the current operation or status change of the units. - Shows the time of the last operation or status change of the units.
